# System Purpose and Workflow

The Telegram bot serves as a vital tool, empowering farmers to select suitable crops by entering soil data, receiving tailored recommendations based on specific parameters.

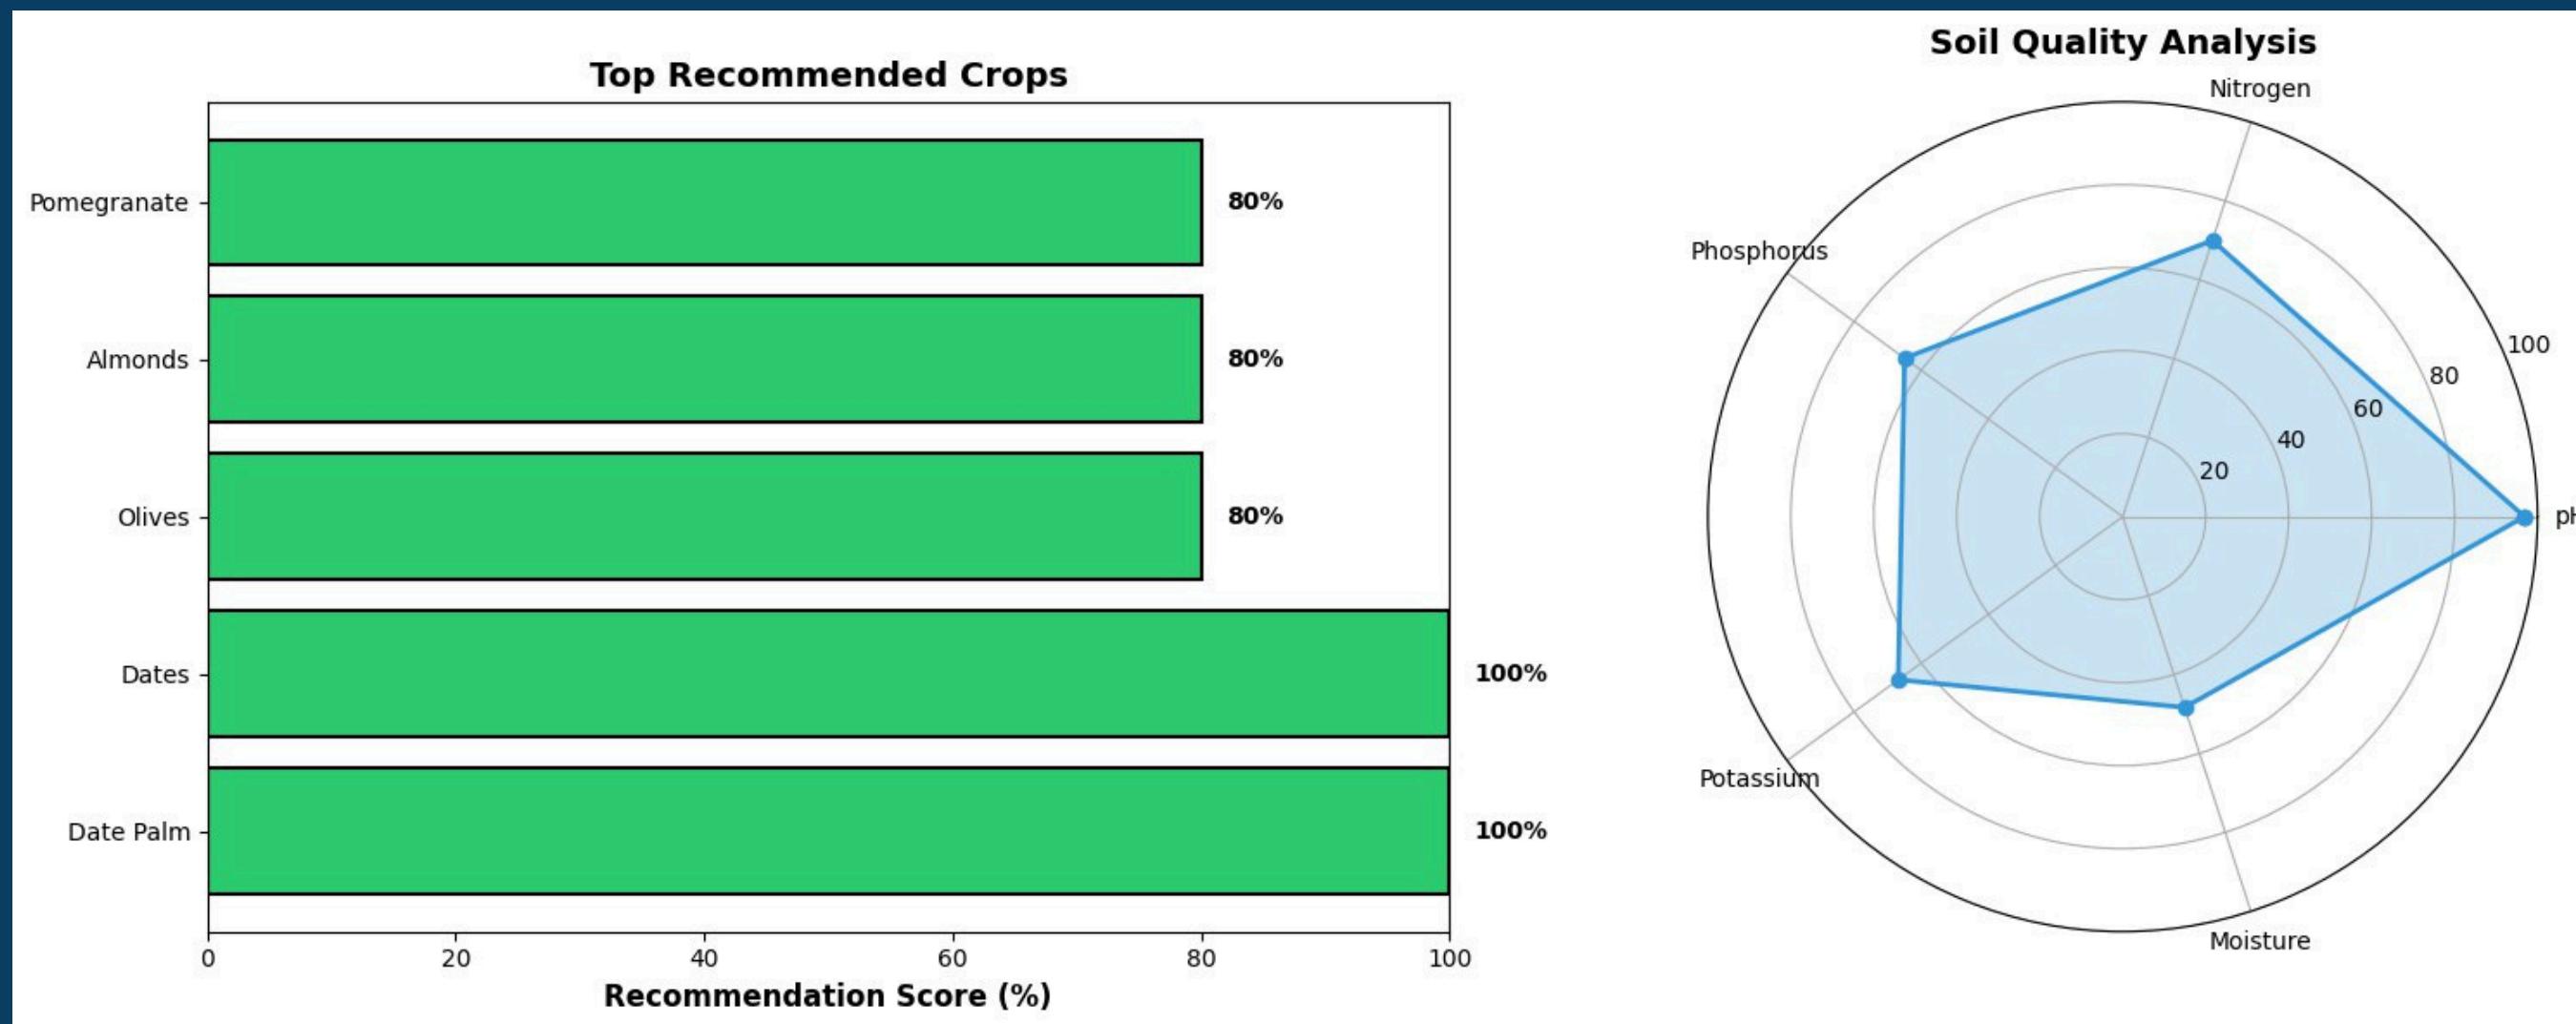

# Processing and Visualization

This section elaborates on how soil data is processed and visualized through the Telegram bot, ensuring farmers receive clear insights into their crop recommendations.

# Current Features

This system operates as a **rule-based AI** crop recommendation chatbot, designed to assist farmers without automatic learning, ensuring precise and manual control over updates and functionalities.

# Thank You
